Steps to be followed in order to run the project.

1. Extract all the files in the zip in a folder of your choice. Please note that all the files need to be present in the same folder.
2. You will need to install all of the following libraries before running the code.
    Pandas
    numpy
    pandas_datareader
    math
    matplotlib
    statsmodels
3. Once the libraries are successfully installed, you can run the python file in a terminal.
4. select one of the 2 companies on which you want to perform the experiment and you can view the results of the experiment.
